Event Registration — Administrator Guide

For organizers who create events, manage users, confirm registrations, check attendees in, and review results. (Participants have a separate guide: **PARTICIPANT-GUIDE.md**.)

> **Signing in:** open the app URL and sign in with your administrator account. Admins land on the **Dashboard**. The demo admin account is `admin@demo.com / Admin123!`.

Admins have four areas in the top navigation bar: **Dashboard**, **Events**, **Users**, and **Scanner**.

> **Important — how registration works now:** registrations are **not** confirmed automatically. When someone registers they are marked **Pending**, and **no entry pass is sent yet**. An admin (or a user granted the confirmation permission) reviews the list and **confirms** registrations — only then is the **confirmation email with the QR entry pass** sent, and only a confirmed pass can be checked in. See *Confirming registrations* below.

---

1. Dashboard

Your landing page after signing in. It shows at-a-glance cards:

Card	Meaning
Total events	Every event you've created
Upcoming	Events whose start date is in the future
Registrations	Total people registered across all events
Checked in	Total checked in, plus the overall check-in rate (%)

Below the cards, **Recent events** lists your latest events with an attendance progress bar. Click any card to open that event.

---

2. Creating an event

1. Go to **Events** → **New event** (top-right button).
2. Fill in the form:
   - **Event banner** (optional) — click **Upload banner image** to add a picture shown across the top of the registration page and on the participant *Browse Events* cards. You can **Replace** or **Remove** it later.

- **Title** and **Description**
- **Start date / Start time** and **End date / End time** — click the calendar icon to pick the date; set the time in the time box. For a multi-day event, make the range span all the days (individual days are handled by *sub-events*, below).
- **Venue**
- **TV welcome message** (optional) — a custom greeting shown on the check-in **TV/ presentation screen** when a member's pass is scanned (e.g. "*Welcome, distinguished members!*"). Leave blank to use the default "Welcome".
- **Registration fees** (optional) — free text shown on the registration page and the participant *Browse Events* details (e.g. "*Members: ₱1,500 · Non-members: ₱2,500 · includes lunch*"). Leave blank for a free event.
- **Status** — `Published` (visible/registerable), `Draft`, or `Closed`.
- **Max participants** — capacity. **Leave blank for unlimited.** (For events with sub-events, set capacity per sub-event instead — see below.)
- **Enable public registration link** — see *Public link vs. invite-only*.
- **Sub-events (days / sessions)** — optional; see *Sub-events* below.
- **Schedule of activities** — optional agenda grid; see below.
- **Registration form** — your own custom questions (see *Registration form*).

3. Click **Create event**. You're taken to the event's detail page.

Public link vs. invite-only

- **Toggle ON (public):** anyone with the registration link can register, and the event appears in the participant **Browse Events** screen.
- **Toggle OFF (invite-only):** only people you've **invited by email** can register, and the event is **hidden** from Browse Events. Others who open the link see "*invite-only.*"

> **Tip:** if an event you expect to see in Browse Events is missing, check that it is **Published** *and* has **Enable public registration link** turned on.

Sub-events (days / sessions)

Use sub-events when one event spans multiple days or has several sessions that participants register for **separately** (e.g. *Day 1 — Plenary*, *Day 2 — Workshops*, *Gala Dinner*).

- Under **Sub-events**, click **Add sub-event** and set its **Title**, **start/end date & time**, optional **Venue** (defaults to the event venue), and optional **Max participants**.
- Add as many as you need, across as many days as you need.
- Leave this empty for a normal single event.

When an event has sub-events:

- Participants **choose which sub-events** to attend and get a **separate registration and QR pass for each** — each confirmed and checked in independently.
- Check-in for a sub-event is only open on **that sub-event's** date.
- The **Attendance** tab gains a **Sub-event** column and a filter.
- You can't delete a sub-event that already has registrations (remove its registrations first).

Schedule of activities

An optional agenda shown to participants. Click **Add row** and fill in **Day**, **Time**, and **Activity** for each line (Day/Time are free text, e.g. "Day 1", "9:00 AM"). Only rows with an activity are saved. It appears as a table on the registration page and in the participant *Browse Events* details.

Registration form (custom fields)

Beyond the standard name / email / phone, collect any extra information with your own questions. Under **Registration form**, click **Add field** for each question and set:

- **Field label** — the question shown to the attendee.
- **Type** — **Text field**, **Text area**, **Number**, **Date**, **Time**, **Dropdown**, **Multi-select**, **Radio buttons**, or **Checkbox**.
- **Required** — toggle on to make an answer mandatory.
- **Options** — for Dropdown, Multi-select, and Radio buttons, list the choices (comma-separated, e.g. `Small, Medium, Large`).
- **Category** (optional) — a section name; fields sharing a category are grouped under that heading on the form.

Answers appear as extra columns in the **Attendance** tab and the CSV export.

---

3. The event detail page

Opening an event shows its summary and tabs. Action buttons at the top: **Edit**, **Close/Reopen**, and **Delete**.

Status badge — 🟢 *Registration open*, 🔴 *Full*, or 🔴 *Registration closed*. **Registration counts** — `registered (/capacity)` and `checked in`. **Public link** — when public registration is on, the shareable link is shown with a **copy** button.

Close / reopen registration

Click **Close** to stop new registrations immediately (existing ones are kept); the button becomes **Reopen**. (Setting **Status = Closed** in the edit form does the same.)

Tab: Invite

Send email invitations with the registration link.

1. **Pick contacts** — the contact list. Use the **Search** box and the **pager** for long lists. Tick people; a **"N selected"** badge tracks your total.
2. **Additional emails** — type extra addresses (comma/space separated).
3. Click **Send invitations**. Each recipient gets a personal link.

> **Smart links:** an invited person with an account is signed in automatically and their details pre-filled; others get a guest form with their email filled in.

Tab: Attendance — and confirming registrations

The live roster. Each row shows name, contact, organization, **sub-event** (if any), registration time, and a **Status**:

- 🟠 **Pending** — registered but not yet confirmed (no pass issued).
- 🟢 **Confirmed** — approved; the confirmation email + QR pass has been sent.
- 🟢 **Checked in** — confirmed and attended (with the check-in time).

To confirm registrations (issue passes):

1. (Optional) If the event has sub-events, use the **Sub-event** filter to narrow the list.
2. Tick the checkbox on each **Pending** row — or use the header checkbox to **select all pending**.
3. Click **Confirm selected (N)**. Each selected registration is confirmed and, if it has an email on file, the **confirmation email with the QR entry pass** is sent. A summary shows how many were confirmed / emailed / had no email.

> Only **confirmed** passes can be checked in. A pass that hasn't been confirmed is refused at the scanner ("Not confirmed").

- Custom form fields appear as extra columns.
- **Export CSV** downloads the roster (including sub-event, status, and custom-field columns).

Tab: Feedback

After the event, participants can rate it (1–5 stars + comment). This tab shows the average rating, the number of responses, and each individual rating and comment.

---

4. Users (User master)

The **Users** menu (admins only) is where you manage accounts.

- **Add user** — create an account directly: First/M.I./Last name, **Senate No.**, **Level**, email, an initial **password**, **role** (Participant or Admin), phone, organization, an optional **profile photo**, and the **"Can confirm registrations"** grant (below). Admin-created accounts are pre-verified.

- **Edit** — change any detail; leave the password blank to keep the current one. You can add, change, or remove the user's **profile photo** here.
- **Delete** — removes the account (blocked if the user has event registrations, or if it's your own account).
- The list shows **Name, Email, Senate No., Organization, Role, Level**, and each user's **confirm-grant** status, with a **search** box.

The "Can confirm registrations" grant

This lets a **non-admin** user confirm event registrations without full admin access.

- Turn on **Can confirm registrations** when adding/editing a Participant.
- That user signs in and gets a **Confirm Registrations** menu → the events list → an event's **Attendance** tab, where they can select and confirm registrations. They **cannot** create/ edit/delete events, invite, scan, or open the User master.
- **Admins can always confirm**, regardless of this flag.
- If you toggle the grant for someone already signed in, it takes effect at their **next sign-in**.

---

5. Checking people in (Scanner)

On event day, use a **phone or laptop with a camera**.

1. Go to **Scanner**. Allow camera access; scanning starts automatically.
2. Point the camera at a participant's QR pass. The result banner shows instantly:
   - 🟢 **"Welcome!" / Checked in** with the person's name (and their **Level / Senate No. / organization**, and **photo** if on file) → success.
   - 🟠 **Already checked in** → this pass was already used.
   - 🔴 **Invalid pass** → the code isn't recognized.
   - 🟠 **Not confirmed** → the registration hasn't been confirmed yet (confirm it first).
   - 🟠 **Not open yet** / ⚫ **Event ended** → outside the check-in window.
3. The scanner auto-resumes for the next person; a running **checked-in count** is shown.

TV / presentation mode

Click **TV mode** (top-right of the Scanner) for a full-screen welcome display suited to a screen at the door. On a valid scan it shows a large **welcome greeting** (the event's custom message, or "Welcome"), the member's **name**, their **Level / Senate No. / organization**, and their **photo** if they uploaded one. The camera keeps scanning underneath. Click **Exit TV mode** to return.

> **Check-in window:** a pass can only be checked in on its event's (or sub-event's) day(s). Scanning too early or after it ends is refused.

> **Camera requirement:** browsers only allow the camera over **HTTPS** (or `localhost`). If you see "*Could not open the camera,*" the page must be served over `https://`.

---

6. Editing & deleting

- **Edit** — change any detail, including capacity, status, sub-events, fees, schedule, and the registration form. Existing registrations are kept.
- **Delete** — permanently removes the event **and all its registrations**. This cannot be undone.

Appendix — Admin quick answers

Question	Answer
Someone registered but got no pass	That's expected — passes are sent when you **confirm** the registration. Open the event → **Attendance** → select the pending rows → **Confirm selected**.
An event is missing from participants' *Browse Events*	It must be **Published** *and* have **Enable public registration link** on. Invite-only events are hidden there.
The scanner says "Not confirmed"	The registration hasn't been confirmed yet. Confirm it on the **Attendance** tab, then re-scan.
I want someone to help confirm without being an admin	In **Users**, edit them and turn on **Can confirm registrations**.
A participant didn't get the invitation	Ask them to check spam; **re-send** invites, or share the public link.
The scanner camera won't open	The site must be served over **HTTPS** (or localhost).
I need to stop new sign-ups	Click **Close** on the event (or set Status = Closed).
The event filled up but I want more seats	**Edit** and raise **Max participants** (or the sub-event's capacity).
How do I get the attendee list?	Event → **Attendance** → **Export CSV** (sub-event, status, and custom answers included).
How do I run a multi-day event?	Add **Sub-events** (one per day/session); participants register for each separately.
How do I show fees / an agenda?	On the event's **Edit** screen: **Registration fees** (text) and **Schedule of activities** (grid).

Question	Answer
Where do I set the TV welcome greeting or member photos?	Greeting: event's **TV welcome message**. Photos: members add one at sign-up, or an admin sets one in **Users** → **Edit**.
